

**INSTALLATION INSTRUCTIONS FOR THE VALENTINE ONE RADAR DETECTOR
 AND THE MURAKAMI MANUAL DIM REAR VIEW MIRROR**

This mount was designed for the **Murakami** manual dim rear view mirror. It is easy to identify as it has a “chili pepper” shaped stem. This mirror is found in many Japanese vehicles.

1 - Remove the two suction cups that are on your existing V1 windshield mount. The two holes that were used to secure the suction cups are now used to attach the BlendMount.

2 - Remove the lock washer and nut from the button head screws and place the BlendMount assembly onto the V1 windshield mount. Re-attach the lock washer and nut and tighten with the supplied allen wrench.

3 - Remove the two socket head screws so the top portion of the mount may be removed. Position the mount on the bottom of the stem as shown above. The edge of the mount needs to be where the tapered part of the stem gets smaller. Reattach the top portion of the mount. Tighten both screws evenly and just before the mount starts to clamp onto the stem, make sure it is in the correct position as indicated by the red arrows. Proceed to tighten both screws until mount is securely attached to the mirror stem.

4 - Install the V1 onto the mount. Make the necessary adjustments as shown. We recommend you adjust the V1 so it is as close to the bottom of the mirror as possible. Using the vertical adjustment, adjust upward as far as possible while making sure the mirror dimming switch is still accessible. After all adjustments are made, be sure to check that the hinge pivot and vertical adjustment screws are tight. Grab the long arm of the allen wrench to assure that these screws are securely tightened.

CAUTION

DO NOT use this mount if it interferes with the adjustability or the operation of your rear view mirror in any way.

DO NOT use this mount if the radar detector creates an unsafe viewing obstruction.

DO NOT ATTEMPT TO MODIFY THIS PRODUCT. Consult the manufacturer for assistance.
